CFRD is common in people with CF, and can be related to diabetes. In hospital dental practice (while dealing with high-risk patients), the main rule is that existing conditions in a diabetic patient may affect the outcome. A review recommends instructing diabetes patients not to fast for lipid testing if possible, but if fasting is required, they should receive clear instructions. Good dental care is particularly important for people with diabetes. Find out more from the Diabetes Guide. The successful management of the diabetic patient depends on working closely with healthcare providers. Patients should be given instruction in injection technique using a device intended for this purpose. This includes baseline information about the diabetes disease state and insulin use. 

Injection technique is best learned using the Insulin Initiation Kit with patients. Check detailed instructions for using the NovoLog® FlexPen® prefilled insulin syringe. Information on using NovoLog® is available online. Specific instructions for using NovoLog® Information are available. For patients with type-2 diabetes who are overweight but not obese, scientists have reported that they outlive diabetics of normal weight, in another example. PET/CT Patient Instructions for Tulsa Cancer Institute. Non Diabetic Patients: Black coffee or water only 8 hours before appointment time. No feeding tube.
